ABM EQUIPMENT × eagle

THE **BEST** SOLUTION FOR **YOUR** PROCESS

Highest performance or lowest TCO?

Whether you want the best detectability or the lowest Total Cost of Ownership, ABM Equipment and Eagle provide the best solutions on the market.

Highest PERFORMANCE

Eagle was the first to leverage PXT and are the only ones as of 2023 to use the technology effectively. This allows us to find contaminants half the size of competitors while reducing false rejects and improving weight readings. These models are some of the most expensive on the market but are the highest performing. See *abmxray.com/pxt* for more details.

Lowest TOTAL COST OF OWNERSHIP

Ruggedly built with generators that can last several times past the industry standard, Eagle's legacy models are the most cost-effective on the market over their lifespans. They fulfill buyer's requirements, reduce maintenance visits, and minimize parts replacements. And with ABM's fabrication capabilities, they can be updated along with technology over the years.

Put it to the Test

Arrange a head-to-head with any of our competitors or send product for testing.

The Smoothest ONBOARDING

ABM Equipment's thorough rollout package ensures each department knows what is coming and what is required of them. A simple online training portal (managed by your trainers) gives your staff familiarity with the equipment so they can digest the in-person training easily.

Most Accessible RENTALS

With over 30 circulating rental units, ABM Equipment ensures any acute needs can be handled even if your other machines are at capacity. Although ABM can receive product in-house if your labor is also at capacity, being able to rent machines that your personnel are familiar with simplifies logistics.

The Best SUPPORT

With more technicians than other distributors and Eagle themselves, ABM Equipment's support department is relied upon by many companies across Northern America and abroad. 24/7 phone support is provided for all customers and technicians can often be dispatched within 24 hrs.

Most Flexible CUSTOMIZATION

As with the rest of your processing equipment, x-ray machines need to be optimized for the application. Whereas other OEMs prevent their distributors from changing their hardware or software, Eagle allows ABM Equipment to configure ANY aspect of Eagle machines. In fact, ABM is responsible for a number of solutions that have been adopted by various OEMs.

Custom Hardware

- Washdown upgrades
- Infeeds and outfeeds
- Rejects
- Guides
- Louver configuration
- Many more

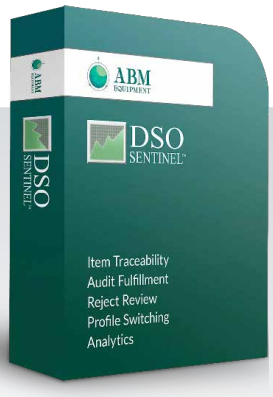

Custom Software

- Scanner integration
- Filler feedback
- Product tracing
- Change tracking
- Validation tracking
- Many more

The Best SOFTWARE

DSO Sentinel goes far beyond built-in OEM software. Not only does it streamline audits and satisfy a page of Costco requirements, but it helps improve x-ray performance. It sends daily shift reports to OPS managers, alerts them of abnormalities real-time, and can interface with nearly any existing hardware or software.

Visit *dsosentinel.com* to learn more about its vast capabilities.
